

comprises a P4H gene that complements an endogenous P4H gene mutation, and

(b) observing the effect of the test compound on the prolyl 4-hydroxylase activity of the progeny of the test nematode, P4H-gene modified nematode or the wild-type nematode, wherein a dpy or embryonic lethal phenotype indicates prolyl-4-hydroxylase inhibition.

Diring

2. The method of claim 1, wherein the test compound is a chemical.

(D)

- 3. (Amended) The method of claim 1, wherein the test compound is a protein or peptide.
- 4. The method of claim 1, wherein the introduction of the test compound involves placing the nematode in a solution containing the test compound.
- 5. The method of claim 1, wherein the test compound is introduced into a wild-type nematode and the observation of dpy or embryonic lethal phenotype indicates nematode prolyl 4-hydroxylase inhibition.
- 6. The method of claim 1, wherein the test compound is introduced into a P4H-gene modified nematode -2

and the observation of a dpy or embryonic lethal phenotype indicates P4H inhibition.

7. The method of claim 1, wherein the introduction of a test compound is into a test chimeric nematode and the observation of dpy or embryonic lethal phenotype indicates non-native prolyl 4-hydroxylase inhibition.

- 8. (Amended) The method of claim 1, wherein the test chimeric nematode is a *C. elegans* and harbors a dpy-
- 9. The method of claim 1, wherein the observation of a dpy phenotype indicates that the test compound modulates the P4H gene found on chromosome III.

- 12. (Amended) A method for evaluating a test compound's ability to modulate prolyl 4-hydroxylase, comprising the step of:
- (a) introducing a test compound into a Caenorhabditis elegans comprising a dpy-18 or phy-1 mutation phenotype, and
- (b) observing the effect of the test compound on the prolyl-4-hydroxylase activity of the progeny of the Caenorhabditis elegans, wherein the rescue of the 5346380 1.DOC 3 -

Bours

dpy-18 or phy-1 phenotype indicates an increased level of prolyl-4-hydroxylase activity.

- 15. The method of claim 1 wherein the test compound is part of a combinatorial chemical library.
- 16. The method of claim 12 wherein the test compound is part of a combinatorial library.

- 17. (Amended) A method for evaluating a test compound's ability to modulate P4H, comprising the steps of:
- (a) introducing a test compound into a test chimeric Caenorhabditis elegans, a P4H-gene modified Caenorhabditis elegans, or a wild-type Caenorhabditis elegans elegans, wherein the test chimeric Caenorhabditis elegans has a complemented P4H gene mutation, and
- (b) measuring the level of P4H activity of the progeny of the test *Caenorhabditis elegans*, P4H gene modified *Caenorhabditis elegans* or wild-type

 Caenorhabditis elegans, wherein a lower P4H activity compared to untested control Caenorhabditis elegans indicates that the test compound is an inhibitor of P4H.
